Easier access to encryption: Brandsight SSL Certificates

Protecting your visitors' information is now even more accessible. GoDaddy Corporate Domains has an easier way to manage SSL certificates through your existing Brandsight platform. This exciting new feature set includes integrated purchasing, automated renewals, simplified validations, and consolidated invoicing.

Get started by clicking on the new SSL tab now located in the main navigation of your Brandsight platform. For any questions, please connect with your Client Success Manager.

Managing Your SSL Certificates

The SSL tab in your main navigation brings you to the SSL Overview Page. From here, you'll have quick access to purchase new SSL certificates, review active or pending certificates, and check the validation and configuration status for each.

Purchase a New SSL

This key feature provides access to purchase new SSL certificates for your Brandsight-tracked domains within the Brandsight platform. The following SSL certificates are offered for one-year terms, available with automatic renewal:

- Domain Validation (DV) certificates
- Organization Validation (OV) certificates
- Extended Validation (EV) certificates
- Domain Validation (DV) Wildcard certificates
- Organization Validation (OV) Wildcard certificates
- SAN Certificates (DV, OV, and EV multi-domain certificates)

To purchase, simply select the desired SSL certificate and check out, and this will be added to your next invoice, consolidating all your billing needs onto one convenient monthly report.

Update Auto-renewal

Auto-renewal is enabled by default for all new SSL certificates purchased through the Brandsight platform, ensuring continuous protection for your websites. On your SSL Overview Page, you can easily disable this status if desired. This feature helps prevent any missed expiration dates and maintains your site's security effortlessly.

Seamless Autovalidation

Brandsight's autovalidation feature is seamlessly integrated for domains active in your account, working to automatically confirm your domain ownership as soon as you purchase your DV certificates. This means less hassle and faster issuance, allowing you to secure your sites more quickly without any additional effort on your part.
